

Player aid

The Data Protection Risk Game, paper version. One for each team.

Each turn: one action

Play a card. The processing owner plays a measure card, pays its coins and moves the figures on the matrix.

Swap cards. Put up to [3] cards on the discard pile and draw as many. It costs [1] coin. This is your action.

Then the facilitator draws an event.

Card colours

Grey, project. Played once, then onto the discard pile. Draw a new card.

Blue, shareable. Pile it face down in front of you. It comes back to your hand at the end of the project. No new card.

Yellow, central. Stays face up on the table and keeps working in every later project. Draw a new card.

End of a project

Roll your d20 once. The facilitator checks every figure on your matrices. Roll too low for the probability row of a figure and you pay for its impact.

Coins. You get coins at the start of every project. A team that cannot pay is out of business.

Optional rule. Playing a card? Explain, as creatively as you can, why this measure works perfectly here.

Optional rule. Pay [1] coin and call in a DPO to argue why the project must be stopped. The facilitator decides.

The matrix
