

Facilitator sheet

1. Start of the project

1. **Cards.** Every team has [9] cards in hand, blue cards turned upright again. Deal up from the draw pile.
2. **Coins.** Pay each team [10]. First project: plus [20] starting coins, [30] in all.
Your power: more generous = longer game, stricter = shorter. Same for every team. Make up reasons: "Budget freeze", "Economy is taking off".
3. **Risks.** Turn over one or more risk cards. Short story. Same risks for every team.
4. **Matrices and figures.** One matrix per risk. Risk card circle: **left number = probability, right number = impact**. Put the figure of that colour on that space (see matrix).
5. **Yellow cards.** Every upright yellow card still has to make its moves, once, on the new matrices. Then it is turned sideways. None in the first project.

2. Each of the four turns

Teams (one action each, all at once): **play a card**, pay its coins, move figures on every matrix. Or **swap** up to [5] cards, free (not sideways blue cards).

Your power: 1 or 2 coins when a team explains well why its measure fits the risk. Nothing for a funny story that does not fit.

- Grey: discard, draw a new card.
- Blue: face up and turned sideways next to the team, no draw. Once per project. Still part of the hand. Face up = played before, so replay price.
- Yellow: face up on the table, turned sideways (moves made this project), draw. Moves now.

You: check the moves. After all teams: draw an event card, read it out, applies to all. "Lose one action" = turn lost, "gain one action" = extra turn. Draw pile empty: reshuffle discard. Events can change the number of turns.

3. End of the project

a) Optional: the DPO (before rolling)

Optional rule. Ask before anybody rolls. A team with a figure in the red pays [1] coin (not refunded) for a DPO, who argues to stop the project. Roll your d20 in secret: [10] or above = management open to it, a good argument beats a low roll.

Your power: yes if the argument names a real weakness, the roll is only a guide.

- **Bought:** no roll, no check, no cost this round. The risk comes back next round: same matrices and figures, full turns again, on top of the new risks. Blue and yellow cards are not played on the moved matrices: only grey cards move their figures.
- **Not bought:** continue as normal with b) Roll. The coin is lost.

b) Roll

Each team rolls its d20 once, in the open. Safe if the roll is the **probability row** number or above.

Probability	Needs to roll	Chance of trouble
4	20	95%, only a natural 20 saves you
3	14 or above	65%
2	8 or above	35%
1	2 or above	5%, only a natural 1 fails

c) Cost and story

Per failed figure: cost = **impact** (column) squared, in coins. You make up the story. Cannot pay = out of business.

Impact		Cost	The story
1		[1] 	A complaint. Someone writes in, you answer.
2		[4] 	Report to the authority. Lawyers and forms.
3		[9] 	Inquiry by the authority. Lawyers, forced changes.
4		[16] 	People get hurt. Lawsuit, damages, newspapers.

Optional rule. A team that cannot pay argues to management it was not their fault. You play management. Roll your d20 in secret as a guide: [10] or above = open to covering, a good argument beats a low roll. May cover some or all of the fee.

Your power: cover part if its measures fitted its risks, none if they were scattered.

4. Next project

Back to step 1. Turn blue and yellow cards upright again (also after a bought DPO). Blue cards stay in the hand, yellow cards on the table, all face up.
